

TESTING WILL NOT CHANGE THE TREATMENT

COVID-19

Testing availability is limited.

Testing is being prioritized for patients that are hospitalized, healthcare workers, & first responders.

If you are concerned about not having access to testing for COVID-19, remember: testing will not change the treatment.

If you are experiencing symptoms of COVID-19, **stay home!**
→ fever, cough, shortness of breath

Stay away from others.

Isolate yourself from family and other household members until:

At least 7 days have passed since your symptoms began

You have been **fever free for 3 days** (72 hours) without the use of fever-reducing medication

Your respiratory symptoms (cough, shortness of breath) have improved

COVID-19 SPREADS THROUGH CLOSE CONTACT

ISOLATION For people who are **sick**

What does it mean?

- Stay in separate room from others in your home
- Use a separate bathroom if possible
- Family/roommates should practice self-quarantine
- Wear a mask if you go into shared spaces

QUARANTINE If you've been **exposed** but aren't sick

What does it mean?

- Stay home + self-monitor for 14 days
- Family or roommates should practice social-distancing
- If you become symptomatic, family + roommates should also self-quarantine
